

Supplier Information:

Supplier [Samcrete Egypt- Precast Factory Prestressed Slabs](#)

Description:

Samcrete Precast Prestressed Hollow Core Slabs 20 cm thickness (8 inch), Light reinforcement, according to ASTM standards with the following specifications:

Concrete

Unit weight : 2200 Kg/m³, Characteristic Compressive Strength : 350 Kg/cm², Release strength (at 3 days) : 260 Kg/cm², Modulus of Elasticity (initial) : 220,000 Kg/cm², Modulus of Elasticity (final): 290,000 Kg/cm², Ambient Relative humidity : 50%

Prestressing Strand

Ultimate strength: 17,570 Kg/cm², Initial Prestress : 0.7 Times Ult, Minimum cover of strand: 2.5 cm. Grout A mixture of not less than one part portland cement to three parts fine sand. Grout that seeps from the joint shall be completely removed before it hardens. Minimum 28-day compressive strength - 3000 psi.

Bearing Strips

Multi-monomer plastic, hardboard or approved equal.

Prestressed Slabs: Precast Prestressed HC ASTM Slabs 8" Light Reinf.

This product example illustrates the variation structure providing flexible configuration for possible factors such as size, color, packaging, etc.
